

Battery Recycling at Fermilab

The Hazard Control Technology Team (HCTT) manages Fermilab's Battery Recycling Program. The program has been consolidated into one centralized program. To create a more user-friendly recycling program, the following initiatives have been implemented:

- Battery recycling stations have been set up lab wide, usually located near employee mail stations. Recycling stations include recycling containers, clear tape and instructions.
- HCT Team will perform pickups on a quarterly basis. **No** Material Move Request required.
- HCT Team will package and coordinate the recycling of all spent batteries with off-site recyclers.
- HCT Team will except all Fermilab purchased batteries.

Contact the HCT Team for advanced pickup service, additional recycling containers or if you need a recycling container set-up in your area.
