

## Memorandum

June 15, 2010

**To:** Bruce Chrisman  
**From:** Nancy Grossman   
**Subject:** Revised FESHM Chapters

The following FESHM Chapters have gone out for Labwide Review. It was observed by a Fermilab employee that the risk assignment methodology discussed in 1040.3 with respect to frESHTRK findings might also be useful for other purposes such as decontamination and decommissioning activities and some aspects of accelerator safety assessments documented in safety assessment documents (SADs). Accordingly revisions to FESHM Chapters 1040.3, 2010, and 8070; and FRCM Chapter 8 are proposed to accomplish this.

***FESHM Chapter 1040.3 – frESHTRK Procedures – Risk Management***

***FESHM Chapter 2010– Planning and Review of Accelerator Facilities and Their Operations (Work Smart Standard)***

***FESHM Chapter 8070 – Facility Decontamination and Decommissioning***

***FRCM Chapter 8 – Accelerator Shielding and Radioactivation***
