

Memorandum

March 6, 2010

To: Bruce Chrisman
From: Nancy Grossman 
Subject: Revised FRCM (Fermilab Radiological Control Manual) Chapters 2-7 and 9-11 and FESHM Chapter 10010 (Radiation Protection Program)

FRCM Chapters 2-7 and 9-11 along with FESHM Chapter 10010 have been revised due to the following:

Federal Regulation 10 CFR 835, "Occupational Radiation Protection" was amended in June 2007 with complete implementation at all DOE facilities, including Fermilab, required by July 8, 2010. The revisions to Fermilab's radiation protection program needed to comply with the amended Regulation are extensive and were approached in two stages. The first stage was reflected in revisions to the FRCM made in December 2007. Completion of the second stage of this implementation is the principal motivation for making the current revision. Opportunity was taken to also make many editorial changes and other minor changes that improve the clarity of the document. FESHM 10010, "Radiation Protection Program", is the FESHM chapter that clearly states that the FRCM is part of the Fermilab ES&H Manual. It was reviewed essentially without change at this time as part of the normal cycle of FESHM and FRCM updates and revisions.

These chapters went out for Labwide review and all issues were addressed. After final approval, please return this approval page to Jody Federwitz at MS119 for posting on the web.

Please be advised that Chapter 8 is still under review.
