

## Memorandum

June 4, 2012

**To:** Mr. Michael J. Weis

**From:** Nancy Grossman *mm for NLG*

**Subject:** Updated WSS FESHM Chapters  
5041 – Electrical Utilization Equipment Safety, and  
5042 – AC Electrical Power Distribution Safety – For Systems Operating  
Between 50 and 600 VAC Nominal

Both of these FESHM Chapters are part of our Work Smart Set and have been updated as follows:

The word “approved” has been removed as it related to Nationally Recognized Testing Labs. NRTLs do not approve equipment, they provide a listing for equipment. In addition (in FESHM Chapter 5042), the Electrical Hazard Analysis/Work Permit was updated to comply with the 2009 version of NFPA 70E.

These chapters did not go out for Lab-wide review, nor do they require Directorate approval.

Members of the Fermilab Site Office who are on the review distribution list will receive an email notification when the final version has been posted.
