Re: FESHM 6020.3 – Storage and Use of Flammable Gas and FESHM 4190 – Special
Toxic Hazards, Beryllium and Beryllium Alloys

These two chapters have been updated and reviewed by Subject Matter Experts. The changes in 6020.3 involved updating stated requirements to match current regulations. 4190 changes were driven by the results of a Tripartite and centered mainly on the medical and training requirements for beryllium workers. Joel Kofron and Rich Ruthe have sent email notifications to personnel currently requiring this training to inform them of the increased frequency (once every 3 years as opposed to one time only).

Due to the minor changes in 6020.3 and the notifications already sent for 4190, these did not go out for lab-wide review and do not require Directorate approval.
